

Optical Splitter

VIDI offers high quality optical splitters for various applications. Tailor-made to customer requirements, according to highest standards, designed, built, individually tested in Germany and of course with certificate.

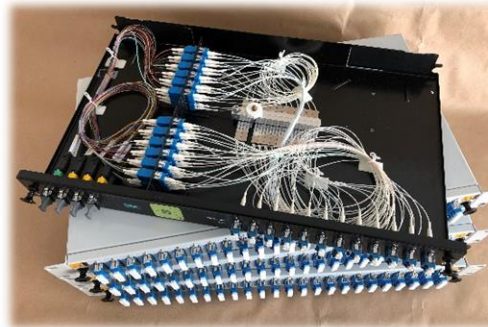

Whether for measurement purposes, for signal splitting or for adapting optical fibres or connector types with only one device.

VIDI's optical splitters are individually designed to meet the customer requirements and handmade by VIDI in Darmstadt.

As standard, the splitters are installed in 19" chassis, only 1 RU high. Other chassis are available on request.

Adaptation of connector types and splitters in one device, e.g. MTP 12/24 to LC. Connector types and attenuation ratio can be selected individually.

The completely passive design guarantees high reliability and long service lifetime. VIDI offers a 5 years warranty for each device.

System Highlights:

- Individually tailor-made to customer requirements.
- All common connector types available.
- Attenuation ratio can be customised to suit individual requirements.
- Up to 24 splitter per 1 RU.

**Individually handmade and with test certificate,
„Designed, Assembled and Tested in Germany“!**
